Session Detail

1601 Installing and Maintaining Linux Systems with the System Installation Suite

Length: 1 hour 15 minutes

Level: Intermediate

Abstract: The open source System Installation Suite is a set of utilities for creating system images, performing automated cold installs, and efficiently propagating changes to machines in your network. SIS is a file based imaging tool, which simplifies distribution and architecture independency and the process of making incremental changes to an image. This talk will be an introduction to the tools and processes, as well as a summary of future plans.

Speakers: Daniel Frazier
N/A
Hewlett-Packard
